

A Comparative Study of the Surgical Anatomy of the Tendons of Insertions of the Extrinsic Muscles of the Eyeball in different Domestic Animals.[Eine Vergleichend-anatomische Untersuchung der Sehnenansätze der ausseren Augenmuskeln bei Verschiedenen Hausti

A. Hifny und N.A. Misk

Abstract:

A study of the length, width, and line of insertion on the eyeball, relative to the limbus was made of the extrinsic eye muscles of 11 domestic animal species. Eyes were collected fresh from abattoir or studied in the gross anatomy dissecting laboratory of the Institute of Veterinary Medicine. A comparison of these species is made regarding the description of the mode of insertion of these muscles.
