# Some histological and Morphometrical Studies of the Extraocular Muscles in Dog

A.M. Kassem, A. Hifny and N.A. Misk

## Abstract:

The study of the histomorphological features of the extraocular muscles in the dog showed that, the thickness and length, of the muscle bundles as well as the histomorphological features of these muscles is not the same. The C.T. capsule and C.T. septa within the muscle, are also variable
