

Organized Peritracheal Haematoma in a Cow

Nigam J.M., N.A. Misk and J.F. Rifat

Abstract:

Manuscripts submitted by foreign authors often provide a basis for comparison of diagnosis and treatment. In this paper from Iraq, a case of a 6-year-old cow with a peritracheal hematoma is presented. Surgical removal of the hematoma is described, and photographs and a radiograph accompany the text.
