# Venous. Diverticulum at the Intermandibular Space in a Donkey

N.A. Misk, M.H. El-Guindy and F.M. Makady

## Abstract:

Manuscripts from foreign countries often provide a basis for comparison of veterinary diagnosis and treatment techniques. In this paper from Egypt, a case report of a 4-year-old female donkey with venous diverticulum in the intermandibular space is presented. Surgery is described, and photographs and a radiograph are included.
