

Surgical management of Some Ocular Diseases in Buffaloes, Cattle and Sheep

N.A. Misk and S.F. Ismail.

Abstract:

Many ocular affections have been described in cattle and sheep. Entropion, ectropion, subconjunctival abscesses, prolapse of the nictitans gland, blepharitis, conjunctivitis, keratitis, hyphaema and cataract were the most affections recorded in cattle and sheep. The present study throw a light on the symptoms, diagnosis and possible treatment of some ocular diseases in buffaloes, cattle and sheep.
