

Management of Ocular Diseases in Donkeys.

N.A. Misk

Abstract:

Different ocular and adnexal diseases have been reported in horses. Entropion, trichiasis, distichiasis, nasolacrimal duct obstruction, dacryocystitis, conjunctivitis, keratitis, corneal lacerations, corneal ulcers, iris cysts, moon blindness, sarcoids, neoplasms, glaucoma, cataract, strabismus, and panophthalmia were among the most common diseases recorded in horses. Available literatures regarding ocular affections in donkeys are meagre. The purpose of this article was to report some ocular and adnexal diseases in donkeys and to throw a light on their symptoms, diagnosis, and possible treatment.
