

Kataraktoperation Bein Esel

N.A. Misk, F.M. Makady and A.M. Sayed.

Abstract:

A surgical procedure for extraction of a cataractous lens from donkeys is de-scribed that was performed on 24 cata-racteous eyes of 19 donkeys of both sexes (14 unilateral and 5 bilateral). Intracap-sular extraction technique was used for treatment of mature and hypermature cataract (21 eyes) while extracapsular technique was used for lenticular cata-ract in which the lens capsule was trans-parent (3 eyes).
