Abstract:

The number of people that use computers and internet has grown quickly, also changed our vision about the future. The internet is an integral part of modern life. The study aimed to explore the relationship between the internet addiction and social communication skills of students in Assiut University and identify types of internet addiction among practical and academic faculties. Descriptive design was used in carrying out this study. The internet addiction and social communication skills scale were used as instruments for data collection in this study. The total sample size was 825 students, the majority of the sample were females, and the minority were married. In addition, it was found that, more than half of them from academic faculties, and the rest of them from practical faculties. Also, there was statistically significant difference between internet addict and communication skills. Conclusion: The Internet use showed a significant difference between Sociodemographic data and internet addict. Therefore, addicted students are more interested to use internet many hours per day. There was a relationship between internet addict and lack of social communication skills.
