Abstract:

Uniplant is a single 35mm contraceptive implant releasing nomegestrol acetate with an effective life span of one year. This study was undertaken to evaluate the possible effects of three-year use of uniplant on some liver enzymes (SGPT, SGOT and GGT) in Egyptian women and to evaluate whether the past asymptomatic hepatitis B virus infection would predispose to any changes in these enzymes. This is an uncontrolled prospective study including 187 women of reproductive age who desired contraception for three years (three ...
