Long-term Outcomes of Laparoscopic Wedge Resection for Gastrointestinal Stromal Tumors of the Stomach of Less Than 5cm in Diameter

Anwar Tawfik Amin, MD, PhD, Yohei Kono, MD, Norio Shiraishi, MD, PhD, Kazuhiro Yasuda, MD, PhD, Masafumi Inomata, MD, PhD, and Seigo Kitano, MD, PhD

Abstract:

Background: Few long-term results of laparoscopic resection for gastrointestinal stromal tumors (GISTs) of the stomach have been established to evaluate technical safety and oncologic feasibility. Methods: Between April, 1998 and October, 2008, data of 18 patients who underwent laparoscopic resection of GISTs of
