Cleft lip (hare lip), campylorrhinus lateralis (wry nose) and congenital flexural deformity of the metacarpophalangeal joints in a calf

Abdelhakiem, M.A.H. and Abdelhakam, M.S

Abstract:

A 3 days old native breed male calf was admitted to the veterinary teaching hospital, Assiut university suffered from facial anomalies and flexural deformities in the metacarpophalangeal joints resulting in respiratory snoring and inability of the animal for ambulation. The defects of the limb were only managed surgically by cutting of the superficial and deep flexor tendons then external coaptation of the limbs using splints and gypsum
