Role of Trans-Catheter Prostatic Artery Embolization In Management of Benign Prostatic Hyperplasia

Momtaz Thabet Allam Abd El-Kareem Hasan Abd Allah Moustafa Hashem Mahmoud Hany Mohammad Abd Al hakeem Seif Hassan Abdellatif Abo-Lella

Abstract:

Prostatic artery embolization (PAE) for BPH has been shown to be safe and effective in inducing prostatic volume reduction in animals and humans. PAE is a safe and painless outpatient procedure with low morbidity in most cases after failure of medical therapy.

Keywords:

prostatic hyperplasia-Therapeutic embolization-Angiography-Catheterization.
