

QAAP2 Project

Project beneficiaries:

- All the students.
- The heads of clinical departments in university hospitals, the Ministry of Health, Health Insurance, and private hospitals.
- The directors of maternity and child care centers.
- The directors of primary health units.
- Various population groups (schools' / university students / people with special needs / factories - companies).

General goals

1. Evaluating the educational process by measuring the performance indicators of the teaching staff in order to identify the defects and weaknesses.
2. Spreading the culture of quality and evaluation among students, teaching staff, as well as the administrative staff, by holding periodic meetings with them.
3. Develop education systems to raise product quality through:
 - Developing curricula and teaching methods as well as academic and administrative regulations, which leads to facilitation, efficiency, seriousness and objectivity in order to keep pace with the global development in the field of nursing.
 - Starting the creation of a database for all theoretical and practical study programs for the Bachelor's degree.
 - Developing systems of theoretical, oral and practical examinations and methods of correction to ensure objectivity, justice, transparency and support of trust between the student and the professor, as well as the discovery of those with real competencies.

- Establishing systems to develop the student's freedom of thought and the ability to debate and criticize.
- Updating the laboratories for nursing skills training.
- Updating the teaching halls and providing them with modern audio-visual equipment.

4. Follow up the global scientific and technical development and work to interact with national and international organizations that are concerned with evaluating and confirming quality in university education.

5. Expanding the base of participation in decision-making among the faculty employees in partnership with the unit members.

6. Follow up the seriousness, firmness and objectivity in applying the rules and procedures.

7. Conducting studies for the labor market needs of various nursing specialties and activating them.

Project outputs/returns

1. Preparing the faculty's mission, describing the students' academic program and all academic courses.

2. Preparing annual course reports and the program report for the 2007 academic year.

3. Preparing a self-study and annual self-report for the faculty.

4. Preparing and starting to implement the other items of the executive plan in terms of:

- Developing the capabilities of teaching staff and their assistants
- Improving the quality of educational opportunities, and consequently the graduate.

- Participation in solving societal problems and developing the relationship between the university and society.
- Developing scientific research at the faculty and deepening cooperation with the faculty of Medicine at the same university.
- Improving the performance of the nursing service in all health services sites in Upper Egypt and the growth of health awareness in the community and the surrounding environment and provide a quality nursing service that all beneficiaries feel.
