Marzouka Abdel Aziz.**

The Increase of children obesity rates

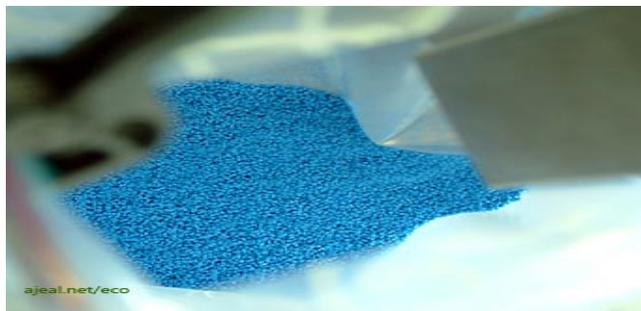

Most statistics and studies related to obesity emphasize the increase of children obesity rates and especially in Arab Countries.

Obesity is considered a main cause of health problems such as diabetes, high blood pressure and cholesterol.

There are many studies on children obesity. The sole solution to obesity is a balanced diet which provides the necessary nutrients.

Scientists correlate between a chemical material for plastic industry and cardiac diseases.

Some

scientists stated

that exposure to a particular chemical material used in making plastic containers may result in cardiac diseases. This study may increase pressure to restrict the use of this material in manufacture of bottles and kitchen.

Some American and British researchers studied the effect of (Paicephenol A), by the aid of a U.S. government study about nutrition, conducted in 2006. They found out the presence of high levels of this material is related to cardiac diseases.

David Millester, Professor of Epidemiology and public health, peninsula school of medicine, Exter University.

South Western England, is the leader of the study teamwork and stated that previous results indicated the presence of correlation between (Paicephenol A) and cardiac disorders.

Experts believe that it is possible to find traces of paicephenol (A) – which is used in plastic products such as re used drinks containers and some plastic kitchen wear that used on our daily like in 90% of European and Americans.

البلاستيك يرصف طرقا صديقة للبيئة في الهند

An Indian company has created a new use for the piles of plastic trash. K.K. company collects thousand tons of plastic trash (waste) from trash boxes via a huge net of workers and employees.

The plastic is cut and mixed by asphalt to compose a component known as polymerized asphalt. They say that when it is used, it resists winds in a way better than traditional ways. So, it reduces the holes on the road.

Scientists agree on the previous scientific fact. The road expert says that the process of mixing plastic waste and use them in establishing roads improve the performance of roads. He also says that plastic waste penetrates the holes between the tar mixture and make it resistible for damage in humid weather.

**** China comes in the third international rank in producing energy from wind:**

China comes in third rank in producing energy from air turbine "New Chine" Agency says that the Chinese ability in this field will reach by the end of this year 20 Gigowatt according to the statements of vice head of alternative energies department in the national authority of energy.

China oversteps Spain to come in the third rank in the field of producing air energy and comes after Germany and U.S.A.

China goes towards a growth that reach t 28 this year. It was criticized during kupen Hagen" conference about weather as it prevents the approval of an obligatory term to reduce polluted emissions.
